## Notes:

There are minimum thresholds for security to appear in these rankings. To be included, a security must have traded last month a minimum of both £150,000 value and 50 trades on the RSP.

## Index:

- 1. RSP** - Retail Service Provider. Platform used by UK retail brokers to execute trades on behalf of retail investors. An electronic market-making service where brokers send quote requests for trades, and RSPs provide executable prices for those orders which can be dealt upon. All volume executed via the RSP model is only behalf of retail investors, so this volume can be seen as a proxy for the retail market.
- 2. Winterflood Skew** - RSP Buy/Sell Ratio (%), (Percentage of value traded on RSP which was buy volume : Percentage of value traded on RSP which was sell volume). Percentage changes shown on this statistic are looking at the buy percentage (e.g. +12% would indicate the buy percentage has increased by 12 percentage points).
- 3. Retail Net Demand** - Total buy value minus total sell value of all RSP trades.
- 4. RSP Market Share** - Security's value traded on the RSP as a percentage of the security's total value traded on the whole market.
